Kyle Prindle

AI & Full-Stack Engineer | Product and Engineering Leader

Wilmington, NC | kylegprindle@gmail.com | linkedin.com/in/kyle-prindle-475065203

Summary

Engineer and product leader who takes software from zero to production. Built MyTEPI's entire technology stack as its first engineer and now leads product as a co-founder. Currently building AI assistants used every day by 32 loan officers at GoPrime Mortgage, with RAG pipelines, confidence scoring and PII protection. Seeking a full-time role as an AI/automation engineer, senior full-stack engineer or engineering manager, remote or in North Carolina.

Experience

GoPrime Mortgage | Full-Stack Developer & AI Consultant (Contract)

Mar 2026 – Present

- Built and deployed **Loan Guru**, an AI email assistant used by **32 loan officers** that answers mortgage-guideline questions with cited sources, using a two-attempt RAG pipeline over a Qdrant vector store, weighted confidence scoring and intent classification.
- Automated loan-summary emails from Encompass several times a day across **hundreds of loan applications**, with PII tokenization so borrower data never reaches the LLM in raw form.
- Diagnosed and fixed production issues in the Microsoft Graph API integration, including filter/sort conflicts, deduplication, rate limiting and conversation-ID handling.
- Deployed and run the supporting infrastructure: Qdrant and FastAPI on Linux EC2, n8n on Windows Server.

MyTEPI | VP of Product & Co-Founder

Sep 2025 – Present

MyTEPI | Lead Software Engineer (first engineer hired)

Jan 2024 – Sep 2025

- Built MyTEPI's full technology stack from scratch (React, Node.js, TypeScript, AWS, Heroku), creating the architecture the platform still runs on today.
- Delivered **Discover Your Color**, a compliance and product-verification SaaS platform with QR-code chain of custody and Certificate of Analysis tracking; onboarded **dozens of clients** with hundreds of lab documents each.
- Integrated the platform with client point-of-sale systems, enabling wide adoption of proprietary color algorithms; participating clients saw a **12.5% annual revenue increase**.
- Managed a team of 4, including hiring and training a junior engineer to take ownership of web development.
- Set product strategy and roadmap; own IT infrastructure, technical hiring and architecture decisions, coordinating founders, outside developers, testing labs and physician partners.

Personal project | Daily AI job-search agent

2026

- Built a scheduled AI agent that scans career pages and job boards daily, scores listings against a structured career profile, drafts tailored resumes and cover letters for top matches, removes duplicates and emails a ranked report.

Skills

AI and automation: RAG, vector databases (Qdrant), Anthropic Claude and OpenAI APIs, prompt engineering, n8n, FastAPI, PII tokenization

Languages and frameworks: JavaScript, TypeScript, Python, React, Node.js, REST APIs

Cloud and infrastructure: AWS (EC2, S3, RDS, Cognito, CloudFront, Amplify, Route 53), Heroku, Docker, Linux, Windows Server

Leadership and product: Product strategy and roadmaps, engineering management, technical hiring, mentoring, project management

Earlier experience

Parking management company, Charlotte, NC | Valet Supervisor

2020 – 2024

- Promoted from valet to supervisor at the company's highest-revenue location, the Grand Bohemian Hotel; led teams of 8, trained dozens of new hires and handled guest issues for a 300-room hotel, restaurant and rooftop bar.
- Worked full-time throughout college.

Education

University of North Carolina at Charlotte | B.S. Computer Science

2018 – 2022
